Dreaming up Maths: See the Possibilities in Play

We are excited to invite all Early Years practitioners across the East Midlands to this fully-funded webinar!

Children love making things move, and ramps are a perfect invitation for exploration. But ramp play is more than just fun; it's a powerful way to spark mathematical thinking, problem solving, and reasoning in the early years.

Join us for this engaging webinar from Young Minds Big Maths, a collaboration between early years educators and university mathematicians in the North East. We'll explore how simple ramp play creates rich opportunities for prediction, experimentation, and problem solving, as children test ideas and explore cause and effect.

You'll gain practical insights, real examples from our free Ramp Play booklet, and strategies to deepen the maths in everyday play — leaving you inspired to see maths in motion.
